

Highlights

- Provides an “experience platform” that enables rapid application development through an open, industry-standard, visual toolkit with reusable components
 - Offers a native iOS mobile app and includes open-standard-based IBM® Worklight® mobile development tools and sample projects
 - Integrates IBM QuickFile capabilities, providing secure content sharing and transfer of ECM documents
 - Works with other solutions such as IBM Case Manager to provide a pluggable framework that facilitates rapid development and deployment of broader content solutions
-

IBM Content Navigator

Enhance workforce effectiveness, collaboration and mobility by uniting enterprise content access

Forward-thinking organizations realize that insightful content interactions help drive better business outcomes. These businesses demand a high degree of content usability, including mobile content access and management, as well as platform extensibility. Users require ways to rapidly access and use data and content that resides across multiple systems and ECM repositories.

The latest version of IBM Content Navigator software can dramatically improve the ways users interact with and manage content. It offers rich, user-initiated capabilities for line-of-business (LOB) users, and it combines powerful, out-of-the-box functionality for diverse use cases with the flexibility to address specialized content applications. Users can access, manage and work with enterprise content directly from desktops, laptops, tablets and other mobile devices anytime, anywhere. And they can securely share enterprise content with anyone in the world.

Content Navigator creates a modern, collaborative user experience through which users can comment and see download activity on documents. It offers simple, unified control, and it provides access to multiple content sources through virtually any modern browser or mobile device. Intuitively designed tools make it easy to customize functionality, create security-rich team collaboration “teamspace” and provide custom views based on user roles. Content Navigator drives increased productivity and can transform the way your organization puts content in motion to enable better business outcomes.
